

# Drainage Management Team

The Drainage Management Team is a group of individuals from different agencies and universities that meet to share information regarding drainage issues, and provide information, education and other assistance to drainage authorities and their technical advisors throughout Minnesota. The team is composed of representatives from:

- Board of Water and Soil Resources
- Department of Natural Resources
- Department of Agriculture
- Pollution Control Agency
- University of Minnesota
- USDA Natural Resources Conservation Service

The DMT has the following capabilities and is eager to assist in furthering your multi-purpose drainage management project:

## 1) Provide Information & Education

Members of the DMT can provide information and education regarding drainage-related Best Management Practices (BMPs) and are available to make presentations to boards or staff members in formal or informal settings. We can tailor the presentation to your specific questions or area of inquiry.

## 2) Provide Technical Assistance

If you have an upcoming drainage project and would like an outside technical perspective, covering project alternatives and opportunities, the DMT can provide that assistance, including:

- alternatives analysis
- concept design

## 3) Connect Projects to Potential Funding Sources

Because the DMT has representatives from many agencies, we can provide information and advice on programs and possible funding partnerships for your projects.
