Plant Indicator Status		
Wetland Indicator Status	Indicator Symbol	Definition
Obligate Wetland	OBL	Plants that almost always grow in wetlands. Estimated probability of >99% for growing in wetland.
Facultative Wetland	FACW	Plants that usually occur in wetlands. Estimated probability of 67% - 99% for growing in wetland (1%-33% in upland)
Facultative	FAC	Plants with similar likelihood of occurring in both wetland and upland. Estimated 33%-67% for growing in wetland.
Facultative Upland	FACU	Plants that sometimes grow in wetland. Estimated 1% - <33% for growing in wetland (>67% - 99% in upland).
Obligate Upland	UPL	Plants that rarely occur in wetland. Estimated probability of <1% for growing in wetland (>99% in upland).

**WETLAND PLANTS and  
PLANT COMMUNITIES of  
MINNESOTA and WISCONSIN**

Third Edition - October 2011

By STEVE D. EGGERS and DONALD M. REED

[Download this book from Wetland Plants](#)

Photo: Scott

**VEGETATION:** The above shallow marsh community includes bulrush (spike) (Carex americanus), broadleaf sparrow (Chenopodium), marsh spike (Carex echinoides), lake spike (Carex lasiocarpa), and spike sparrow (Carex lasiocarpa). The above marsh community includes spike (Carex lasiocarpa), broadleaf sparrow (Chenopodium), marsh spike (Carex echinoides), lake spike (Carex lasiocarpa), and spike sparrow (Carex lasiocarpa). The above marsh community includes spike (Carex lasiocarpa), broadleaf sparrow (Chenopodium), marsh spike (Carex echinoides), lake spike (Carex lasiocarpa), and spike sparrow (Carex lasiocarpa).

**SOIL:** Above marsh (Carex lasiocarpa) with 10 to 15 inches of marsh core (Carex lasiocarpa).

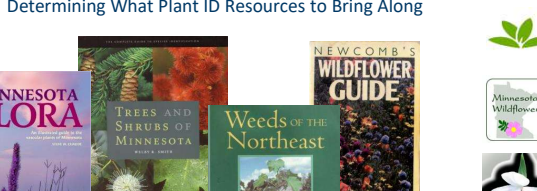

**WETLAND TYPE:** Emergent wetland with 10 to 15 inches of marsh core (Carex lasiocarpa). The above marsh community includes spike (Carex lasiocarpa), broadleaf sparrow (Chenopodium), marsh spike (Carex echinoides), lake spike (Carex lasiocarpa), and spike sparrow (Carex lasiocarpa).

**LOCATION:** Adjacent to Lake Minnetonka, Minnetonka Park, Dakota County, Minnesota.

# Office Review

## Determining What Plant ID Resources to Bring Along

The collage features several plant identification resources:

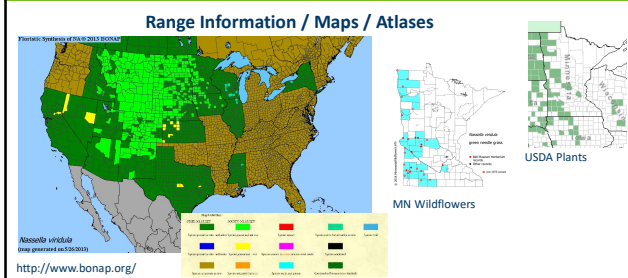

- MINNESOTA FLORA**: A book by Thomas Howell and Robert Howell, published by the University of Minnesota Press. The cover shows purple flowers in a field.
- TREES AND SHRUBS OF MINNESOTA**: A book by Richard S. Smith, published by the University of Minnesota Press. The cover shows a close-up of a tree trunk and leaves.
- Weeds of the Northeast**: A book by Richard H. Cory and Joseph C. Neal, published by the University of Minnesota Press. The cover shows various weeds.
- NEWCOMB'S WILDFLOWER GUIDE**: A book by Renée Newcomb, published by the University of Minnesota Press. The cover shows a variety of wildflowers.
- Minnesota Wildflowers**: A logo featuring a green leaf and the text "Minnesota Wildflowers".
- Minnesota Wildflowers**: A logo featuring a black and white photograph of a flower.

**Plant Characteristics and Identification**  
Learning Module

Click here to  
**Start!**

Developed by the Minnesota Board of Water and  
Soil Resources  
May 2017

17

---

---

---

---

---

---

---

---

**Plant Characteristics** are the defining features of a plant that can help identify the specific species.

Select a plant part to learn more!

References  
Back to Start

18

---

---

---

---

---

---

---

---

## Stem Shape

More stem shapes

Stem shape can be distinctive between plants. For example, Sweet-Flag (*Acrostus americanus*) has a distinct oval shape with flattened sides. In early summer it can easily be mistaken for Cattail or Blue-Flag Iris.

The above stems are Sedge, Bulrush, and Grass stems. In general:

“Sedges have edges.  
And rushes are round.  
Grasses are hollow right up  
from the ground.”

Back to Stems  
Back to all Plant Characteristics

19

---

---

---

---

---

---

---

---

## Stems

**Rhizome** is a horizontal underground stem that puts out lateral shoots and roots (adventitious roots).  
Example: Kentucky Blue Grass (*Poa pratensis*) and Reed Canary Grass (*Phalaris arundinacea*)

Kentucky Blue Grass (*Poa pratensis*) rhizome

**Stolon** is an above ground, creeping horizontal stem or runner that takes root and can put out lateral shoots to form new plants.  
Example: Wild Strawberry (*Fragaria virginiana*)

Back to Stems  
Back to all Plant Characteristics

20

---

---

---

---

---

---

---

---

## Leaves

Leaves are the site where plants make their food through a process called Photosynthesis. Leaves are very unique between plant species and can be one of the most important characteristics to identifying a plant. Leaves, themselves, have many defining characteristics. Select the characteristic below to learn more.

Type

Attachment

Description of Attachment

Shape

Margins

Venation

Back to all Plant Characteristics

21

---

---

---

---

---

---

---

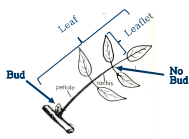

---

## Leaf Type

There are two types of leaves: Simple and Compound.

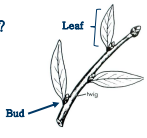

**Compound leaf** is a leaf consisting of several leaflets joined to a single stem.  
Example: Ash tree

**Simple leaf** is a leaf that is joined to a single stem.  
Example: River Birch

Ask yourself:  
• Where is the bud?

[Back to Leaves](#)
[Back to all Plant Characteristics](#)

22

---

---

---

---

---

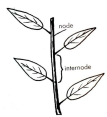

---

---

---

## Leaf Attachment

Leaf Attachment is the pattern by which leaves are attached to a stem. There are four types of leaf attachment: Alternate, Opposite, Whorled, and Basal.

**Alternate:** leaves are attached to the stem in an alternating pattern

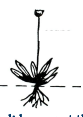

**Opposite:** 2 leaves opposite each other at the same point

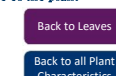

**Whorled:** 3 or more leaves attached at the same point around the stem

**Basal:** leaves at the base of the plant

[Back to Leaves](#)
[Back to all Plant Characteristics](#)

23

---

---

---

---

---

---

---

---

## Description of Attachment

**Petiolate:** When there is a petiole that attaches the leaf to the stem

**Sessile:** When the leaf attaches directly to the stem

**Perfoliate:** When the leaf goes around the stem

**Clasping:** When the leaf clasps the stem but doesn't go all the way around the stem

**Sheathing:** When the leaf continues down the stem

[Back to Leaves](#)
[Back to all Plant Characteristics](#)

24

---

---

---

---

---

---

---

---

## Leaf Margins

More Leaf Margins

**Leaf Margin** is the structure of the leaf edge. The most common margins are below. Select the button to learn more types.

Entire: even, smooth throughout

Toothed: with fine serrations

Doubly Toothed: Toothed with sub-teeth

Lobed: Indented but not to the midline

Wavy: Widely wavy

[Back to Leaves](#)  
[Back to all Plant Characteristics](#)

25

---

---

---

---

---

---

---

---

## Flower Shape

**Regular:** Flowers are symmetrical like the spokes on a bike wheel

**Bell:** The petals are fused together to form a bell shape

**Indistinguishable:** Cannot tell the number of petals or the male and female parts

**Irregular:** Flowers are not symmetrical. They usually have upper and lower lips

**Tubular:** Petals are fused together to form a tube

[Back to Flowers](#)

CORYMB

Simple Umbel

[Back to Flowers](#)  
[Back to all Plant Characteristics](#)

27

---

---

---

---

---

---

---

---

## Fruit and Seeds

**Fruit** is the ripened ovary. They can be very distinct, but not present during parts of the year. The time of fruit ripening can also give clues as to the species.

[Back to Flowers](#)

[Back to all Plant Characteristics](#)

28

---

---

---

---

---

---

---

---

## Smell

**Smells** can be very distinctive. The crushed leaves or seed heads can have smells. Some examples include Sweet flag, the Mint family, and Swamp Milkweed

Sweet Flag smells like sweet lemon

Bee Balm smells like sweet mint

Swamp Milkweed smells like bubblegum

Virginia Mountain Mint smells minty

[Back to all Plant Characteristics](#)

29

---

---

---

---

---

---

---

---

## Surfaces

**The Surfaces** can be soft, rough, prickly, or hairy. There are some distinctions between species that depend on the feel of the stem or leaves. Not only can the stem and leaves have different textures but also the seeds.

The leaves and stems of this plant are rough and hairy

Stem of Staghorn Sumac has soft hairs

Base of an Aster with glandular hairs

30

---

---

---

---

---

---

---

---

## FORBS: FAMILIES AND IDENTIFICATION

31

---

---

---

---

---

---

---

---

## Forb definition

A **forb** is a broad-leaved, non-woody flowering plant with around 148 families

32

---

---

---

---

---

---

---

---

## Families:

- Mint (Lamiaceae)
- Aster (Asteraceae)
- Vervain (Verbenaceae)
- Milkweed (Apocynaceae)
- Smartweed (Polygonaceae)
- Loosestrife (Lythraceae)
- Burreed (Sparganiaceae)
- Cattail (Typhaceae)
- Water Plantain (Alismaceae)
- Iris (Iridaceae)
- Legume (Fabaceae)
- Carrot (Apiaceae)

33

---

---

---

---

---

---

---

---

### Mint Family- Lamiaceae

- 4-angled square stem typically
- Often aromatic
- Flowers in leaf axils, or heads or spikes at end of stem
- Leaves simple, opposite, sharply toothed or lobed

34

---

---

---

---

---

---

---

---

### Bugleweed *Lycopus americanus*

- Small 4-lobed white flowers in axils
- Similar to field mint, but not strongly scented

NCNE	MW	GP
OBL	OBL	OBL

35

---

---

---

---

---

---

---

---

### Aster Family- Asteraceae

- Flowers of two types, ray and disc flowers
- Head surrounded by an involucre bract
- Fruit is an achene

36

---

---

---

---

---

---

---

---

### Giant Goldenrod

*Solidago gigantea*

- Alternate, 3-veined leaves
- Wet sites

NCNE	MW	GP
FACW	FACW	FAC

37

---

---

---

---

---

---

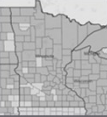

---

---

### Canada Goldenrod

*Solidago canadensis*

- Stem hairy [top part esp.]
- Alternate leaves
- 3-veined
- Upland and transition areas

NCNE	MW	GP
FACU	FACU	FACU

38

---

---

---

---

---

---

---

---

### Goldenrods

Disc flowers

Ray flower

stem texture

*S. canadensis*   *S. gigantea*

3 main veins

*S. canadensis*   *S. gigantea*

39

---

---

---

---

---

---

---

---

### Cup-plant *Silphium perfoliatum*

- Squarish stem
- Not a mint!
- Rough leaf surface

NCNE	MW	GP
FACW	FACW	FAC

40

---

---

---

---

---

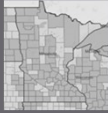

---

---

---

### Sneezeweed *Helenium autumnale*

- Yellow flowers with three teeth at the end of each ray
- Winged stem

NCNE	MW	GP
FACU	FACU	FACU

41

---

---

---

---

---

---

---

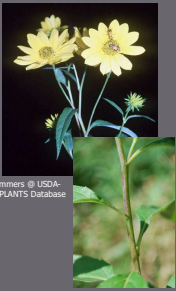

---

### Sawtooth Sunflower *Helianthus grosseserratus*

- Stems smooth with sparse hairs
- Drooping leaves, both sides rough
- Pale leaf underside covered with short hairs

NCNE	MW	GP
FACW	FACW	FACW

42

---

---

---

---

---

---

---

---

### Boneset

*Eupatorium perfoliatum*

- Coarsely toothed leaf
- Perfoliate
- Hairy stem

NCNE	MW	GP
FACW	OBL	FACW

Leaves joined into one

43

---

---

---

---

---

---

---

---

### Vervain Family- Verbenaceae

- 4-angled square stem
- Opposite, toothed leaves
- Flowers in spikes or groups at end of stem

44

---

---

---

---

---

---

---

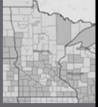

---

### Vervain

**Blue Vervain**  
*Verbena hastata*  
FACW

**Hoary Vervain**  
*Verbena stricta*  
UPL

Fewer stouter spikes

Rounder Leaves

45

---

---

---

---

---

---

---

---

## Milkweed Family- Apocynaceae

- Leaves opposite
- Milky juice in stem
- Flowers numerous in umbels at end of stem

46

---

---

---

---

---

---

---

---

## Common Milkweed *Asclepias syriaca*

- Wide opposite leaves
- Milky sap

NCNE	MW	GP
UPL	FACU	UPL

47

---

---

---

---

---

---

---

---

## Swamp Milkweed *Asclepias incarnata*

- Tapering narrow leaves
- Milky sap (less than other species)
- Wet sites

NCNE	MW	GP
OBL	OBL	FACW

48

---

---

---

---

---

---

---

---

### Smartweed Family- Polygonaceae

- Alternate, simple leaves, Stipules joined forming a sheath (Ocrea) around stem at nodes
- Petals absent, sepals petal-like

49

---

---

---

---

---

---

---

---

### Smartweeds

Pennsylvania Smartweed  
[*Persicaria pensylvanicum*]  
FACW

Water Smartweed  
[*Persicaria amphibium*]  
OBL

Thumbprint on leaf

Both at wet sites

50

---

---

---

---

---

---

---

---

### Loosestrife Family- Lythraceae

- Upper stems multi-sided, square
- Leaves opposite and stalk-less
- Flowers have 6 petals

51

---

---

---

---

---

---

---

---

### Purple Loosestrife

*Lythrum salicaria*

- MN Noxious weed
- Woody square stem
- Leaves lanceolate, opposite or whorled
- Spikes of purple-red flowers

NCNE	MW	GP
OBL	OBL	OBL

52

---

---

---

---

---

---

---

---

### Burreed Family- Sparganiaceae

- Stems erect, unbranched, round in cross section
- Leaves long and linear
- Flowers crowded in round heads with male and female flowers separate

53

---

---

---

---

---

---

---

---

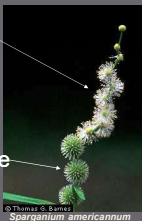

Male

Female

© Thomas G. Smith  
*Sparganium americanum*

54

---

---

---

---

---

---

---

---

### Cattail Family- *Typhaceae*

- Leaves near base, in two ranks, long and strap-like
- Flowers are tiny, in large groupings, male and female portions of spike are separate
- Female flowers on bottom, male flowers on top
- Reproduce by submerged rhizome, creating mats

<http://botany.ccid.tamu.edu/FLORA/gallery.htm>

55

---

---

---

---

---

---

---

---

### Broadleaf Cattail *Typha latifolia*

- Broad leaves usually don't extend past spike
- Upper staminate and lower pistillate portions of the spike are continuous

NCNE	MW	GP
OBL	OBL	OBL

Continuous spike

56

---

---

---

---

---

---

---

---

### Narrowleaf and Hybrid Cattail *Typha angustifolia* and *Typha X glauca*

- Narrow Leaves extend beyond spike
- Staminate and pistillate portions of spike separate, with gap

NCNE	MW	GP
OBL	OBL	OBL

Gap in spike

57

---

---

---

---

---

---

---

---

### Water Plantain Family- Alismaceae

- Stout rhizomes
- Leaves from base of plant, clasping stem
- Multi-branched inflorescence
- Flowers with 3 petals

58

---

---

---

---

---

---

---

### Water Plantain *Alisma subcordatum*

- Leaves elliptical or egg shaped on long stalks
- White or pinkish flowers about 1/8" wide
- Found along muddy shores

NCNE	MW	GP
OBL	OBL	OBL

59

---

---

---

---

---

---

---

### Broad Leaf Arrowhead *Sagittaria latifolia*

- Flowers grow in whorls of 3 from an un-branched stalk
- Leaf shaped like an arrow head

NCNE	MW	GP
OBL	OBL	OBL

60

---

---

---

---

---

---

---

## Iris Family- Iridaceae

- Parallel veined, 2 ranked leaves
- Flowers with 6-petals

<http://montana.plant-life.org/irises/Iridaceae.htm>

61

---

---

---

---

---

---

---

---

## Harlequin Blue Flag Iris *Iris versicolor*

- Deep purple base
- Blue flower with large yellow center
- Found in the North

NCNE	MW	GP
OBL	OBL	OBL

62

---

---

---

---

---

---

---

---

## Virginia Iris *Iris virginica*

- Green base
- Purple flower with small yellow center
- Found in the south

Small yellow center

Mostly green base

NCNE	MW	GP
OBL	OBL	OBL

63

---

---

---

---

---

---

---

---

## Wild Parsnip

*Pastinaca sativa*

- Contact with the plant can cause a sun-induced rash
- Compound umbel of yellow flowers
- Pinnately lobed leaves
- Tall growth habit.

NCNE	MW	GP
UPL	UPL	UPL

67

---

---

---

---

---

---

---

---

## Wild Parsnip

## Golden Alexanders

## Conifers & Broadleaf

- Conifers – a tree that bears cones and evergreen needlelike leaves
- Broadleaf – a tree that bears wide flat leaves that are shed annually

109

---

---

---

---

---

---

---

---

## Conifers

110

---

---

---

---

---

---

---

---

## Clustered Needles (Pines) Pinaceae

111

---

---

---

---

---

---

---

---

112

---

---

---

---

---

---

---

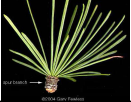

---

**Tamarack**

*Larix laricina*

NCNE	MW	GP
FACW	FACW	FACW

- Deciduous
- Needles are bunched
- Common to swamps and bogs

©2004 Gary Frawley

113

---

---

---

---

---

---

---

---

**Eastern White Pine**

*Pinus strobus*

NCNE	MW	GP
FACU	FACU	FACU

- 5 Needles per bunch
- Needles 2.5 to 5"
- Soft flexible needles

©2004 Gary Frawley

114

---

---

---

---

---

---

---

---

### Red Pine

*Pinus resinosa*

NCNE	MW	GP
FACU	FACU	FACU

- 2 Needles per bunch
- Needles 2.5 to 5"
- Soft flexible needles

115

---

---

---

---

---

---

---

---

### Jack Pine

*Pinus banksiana*

NCNE	MW	GP
FACU	FACU	FACU

- Adapted for fire
- Serotinous cones
- Germinate best on mineral soil

116

---

---

---

---

---

---

---

---

### Single Needles (Fir, Spruce, Hemlock – still Pinaceae)

117

---

---

---

---

---

---

---

---

### Balsam fir

*Abies balsamea*

NCNE	MW	GP
FAC	FACW	FAC

- Needles continuous along stem and branches
- Needles  $\frac{3}{4}$  to 1 inch and flat
- Cones are purple

118

---

---

---

---

---

---

---

---

### White Spruce

*Picea glauca*

NCNE	MW	GP
FACU	FACU	FACU

- Short blue green needles
- Needles are born singly
- Branches slightly droop

119

---

---

---

---

---

---

---

---

### Black Spruce

*Picea mariana*

NCNE	MW	GP
FACW	FACW	FACW

- Branches short and drooping
- Needles are 4 angled with a blunt tip
- Dark (blackish) foliage

120

---

---

---

---

---

---

---

---

## Scale-like Needles (White Cedar)

121

---

---

---

---

---

---

---

---

## N. White Cedar

*Thuja occidentalis*

NCNE	MW	GP
FACW	FACW	FACW

- Spicy fragrance when crushed
- Needles turn yellow-brown in winter
- Needles are bicolor

122

---

---

---

---

---

---

---

---

## Broadleaf Trees

123

---

---

---

---

---

---

---

---

## OPPOSITE BRANCHING

124

---

---

---

---

---

---

---

## Maple (Aceraceae)

Red maple  
(*Acer rubrum*)

146

---

---

---

---

---

---

---

---

## Cottonwood

(*Populus deltoides*)

NCNE	MW	GP
FAC	FAC	FAC

- Opposite leaves (CAP), compound
- Small, purple-black berries
- Twigs brittle due to large pith

147

---

---

---

---

---

---

---

---

### Willows (Salicaceae)

(*Salix spp.*)

18 species native in Minnesota, 3 species naturalized

- Leaf width vs. length
- Upper and lower surface texture, color
- Leaf edges
- Stipules may be present

148

---

---

---

---

---

---

---

---

### Gooseberries or Currents (Grossulariaceae)

(*Ribes spp.*)

9 species native in Minnesota

- Currants lack spines and bristles (1 exception), jointed stalk
- Gooseberries have spines and bristles, berry stalk not jointed

149

---

---

---

---

---

---

---

---

### The Rose Family (Rosaceae)

#### Blackberry & Raspberry

(*Rubus spp.*)

The largest genus of woody plants in Minnesota (33 native, 2 hybrids)

- If present, prickles or bristle shape
- Leaf structure
- Cane growth pattern (both from 1<sup>st</sup> year and 2<sup>nd</sup> year canes)

150

---

---

---

---

---

---

---

---

## Red Raspberry

(*Rubus idaeus* ssp. *strigosus*)

NCNE	MW	GP
FACU	FACU	FACU

151

---

---

---

---

---

---

---

---

## Steeplebush

(*Spiraea tomentosa*)

NCNE	MW	GP
FACW	FACW	FACW

- Leaves alternate
- White to orange woolly undersides

152

---

---

---

---

---

---

---

---

## Meadowsweet

(*Spiraea alba*)

NCNE	MW	GP
FACW	FACW	FACW

- Alternate leaves
- Leaves not woolly

153

---

---

---

---

---

---

---

---

### Buckthorn Family (Rhamnaceae)

#### Glossy Buckthorn

(*Frangula alnus*)

NCNE	MW	GP
FAC	FACW	FAC

- Leaf margins entire (not toothed)

154

---

---

---

---

---

---

---

---

#### Common Buckthorn

(*Rhamnus cathartica*)

NCNE	MW	GP
FAC	FAC	FACU

- Leaf margins with fine teeth

155

---

---

---

---

---

---

---

---

### WOODY VINES

156

---

---

---

---

---

---

---

---

**Grape Family (Vitaceae)**

Virginia Creeper  
(*Parthenocissus quinquefolia*)

NCNE	MW	GP
FACU	FACU	FACU

Woodbine  
(*Parthenocissus inserta*)

NCNE	MW	GP
